

## PROJECT SUMMARY

- A.** Before the disaster, Haiti was looking at reconstructing itself. The disaster focused attention on what was necessary and had started being addressed by various international orgs, including the EU, the Clinton Foundation, etc. The present status of the reconstruction effort appears to be focused on Port Au Prince. Part of the long-term goals (now pushed forward) is to relocate some 500,000 persons elsewhere in Haiti.
- B.** While general focus will be on organizing the relief effort, we have an opportunity to construct a proto-typical town of 100-500 homes based on Imison houses in a specific location. This location is Corregido, a 1740 acre government-owned estate in the vicinity of the Town of Balader which we are working on in conjunction with the Haitian official in charge of it. When the road to Balader complete, Port Au Prince will be only an hour's drive away.
- C.** A successful pilot will pave the way to replicate the success throughout Haiti and eventually elsewhere in the Caribbean with more complex and sophisticated buildings and larger towns. Therefore:
1. The MaVille concept is a series of full-service towns in various locations based on the specific character of the location and community built with the Imison housing system
  2. The prototype will be MaVille Corregido, a customized Cooperative Farming Town of approximately 500 families or 2000 persons, including the production, storage, and market attributes of a farm town.
  3. The MaVille Concept includes both the hard and soft attributes of a town, namely,
    - a. The town, its infrastructure, systems, houses and community structures etc.
    - b. The community: its economic personality and the social, economic and "Green" components necessary for building and maintaining a vibrant, sustainable community.
  4. In order to execute this concept we seek seed capital to create the package that will be presented to the financiers of this project.
    - a. Project Budget, Implementation and Phasing Plan.
    - b. Town Masterplan and all its attributes based on Classic Planning and the Law of the Indies.
      - Streets, blocks, alleys, sidewalks: location and dimensions.
      - Public spaces location and dimensions, including soccer field.
      - Location of main public structures.
      - Subdivision into typical lot sizes.
      - Infrastructure including but not limited to water, sewer power, and communications.
